

## **Introduction:**

There is a bike chain store which has three locations over the USA. Its database tables have been shared with you. All assignments should be answered by SQL queries. Please answer the following questions:

1. Sort products from the highest price to the lowest price
2. Number of orders for each customer in year 2016
3. Add customer email and phone number to query of assignment 2
4. Number of customers with 2 orders in year 2016
5. Find the second most expensive product ordered by each customer

Feel free to ask any questions if needed.
