

Introduction:

There is a bike chain store which has three locations over the USA. Its database tables have been shared with you. Create a Power BI report which contains the following requests:

1. Visualize the number of orders over time.
2. Use a slicer to filter the visual of assignment 1 by states.
3. Visualize the percentage of stocks for each store.
4. Write a measure to calculate the average of orders for each product. Then visualize it with a pie chart.
4. Visual the total order price for each category.

Feel free to ask any questions if needed.
